PROFILE SUMMARY

Postgraduate student in Computer Applications with hands-on experience in Python based systems, debugging, automation, and backend development. Strong understanding of operating system fundamentals, system behavior, and software reliability through academic learning and practical projects. Interested in system engineering, infrastructure support, and quality assurance roles that focus on stability, performance, and dependable software delivery.

TECHNICAL SKILLS

Programming Languages: Python, PHP, Java, SQL

Web Technologies: HTML, CSS, React.js, Typescript, Tailwind CSS, JavaScript

Tools & Technologies: Fiddler, Git, GitHub, Debugging & Memory Inspection, Figma, Affinity, Flask, Socket.IO, MongoDB

PROJECTS

▪ Orbit – Real-Time Location Sharing and Communication System | April 2026

Description: Developed a web-based, real-time location tracking and communication system that enables users to share live geographic positions on an interactive map. Implemented WebSocket-based communication for continuous location updates, multi-user synchronization, and instant messaging. Integrated an SOS alert mechanism for emergency broadcasting and a room-based chat system for controlled user interaction. The system provides dynamic map visualization, user presence tracking, and a responsive, user-friendly UI for a seamless real-time experience, with enhanced usability and accessibility.

Technology Used: React.js, JavaScript, CSS, MapLibre GL JS, Python, Flask, Flask-SocketIO, MongoDB, PyMongo, Node.js.

▪ Sentinel – Real-Time Vehicle and License Plate Recognition System | December 2025

Description: Developed a desktop-based, real-time vehicle and license plate recognition system to automate traffic and surveillance monitoring from live CCTV feeds. Implemented deep learning-based vehicle detection, license plate localization, and OCR-based text extraction with fully offline processing. The system provides real-time visual overlays, configurable detection settings, and local storage of detection history for review, filtering, and analysis.

Technology Used: Python, OpenCV, Ultralytics YOLO, EasyOCR, PyTorch, PyQt6, SQLite, NumPy, VS Code.

▪ Jewellery Store Management System | March 2024

Description: Developed a web-based management system to handle jewellery inventory, automate billing operations, and track sales transactions efficiently. Implemented backend business logic and interactive web interfaces to improve data accuracy, operational efficiency, and overall user experience. Integrated inventory tracking, sales reporting, and record management features to support daily business operations effectively.

Technology Used: PHP, MySQL, HTML, CSS, JavaScript.

AREA OF INTEREST

Interested in system engineering, infrastructure support, automation, and software quality assurance. Passionate about understanding operating systems, application behavior, debugging, performance analysis, and building reliable software systems. Also value intuitive user interfaces and user experience, believing that reliable software should be both functional and easy to use.

VOLUNTEERING

Joshiana 14.0 Committee Member, St. Joseph Engineering College (Autonomous)

Nov - 2025

Supported the successful execution of gaming competitions involving 96 participants from 32 campuses through event coordination and tournament management.

Event Coordinator, Padua College of Commerce & Management

Oct - 2023

Managed event logistics, participant coordination, and operational activities.

ACADEMIC QUALIFICATIONS

▪ Master of Computer Applications

St Joseph Engineering College, Vamanjoor, Mangalore 575028

8.90 CGPA & Pursuing

2024 – 2026

▪ Bachelor of Computer Applications

Padua College of Commerce & Management, Nanthoor, Mangalore 575004

8.41 CGPA

2024
